

Dear TD Hiring Team,

I am applying for the Business Insights & Analytics Co-op/Intern position for Fall 2026. I am a third-year Computer Science Co-op student at the University of Ottawa with hands-on experience in SQL, Python, and Tableau, and a track record of building data pipelines and dashboards that inform real decisions. This role is exactly the kind of work I want to be doing.

One project that speaks directly to this role is Court Vision, an end-to-end NBA analytics pipeline I designed and deployed. I ingested 1,400+ player-season records via Python into a PostgreSQL star schema hosted on Supabase, wrote SQL views to compute a composite player value metric across five performance dimensions, and built both a Streamlit dashboard and a live-connected Tableau BI layer for salary efficiency and team ranking analysis. The whole point of the project was translating messy raw data into something a non-technical audience could actually use to draw conclusions.

At York Region, I built incident tracking dashboards in ServiceNow, Excel, and Power BI monitoring volume, priority, and resolution time across 500+ monthly tickets, with findings that directly shaped infrastructure and staffing decisions. That experience gave me a practical sense of how analytics work lands in a business context, not just technically but in terms of how you communicate findings to people who are not in the data.

I am a strong fit for the SQL, Python, and Tableau requirements listed, and I am genuinely interested in TD as a place to grow. The combination of scale, structured mentorship, and meaningful analytical work is hard to find in a co-op.

Thank you for your time and consideration.

Sincerely,

Zain Rizvi
