EDUCATION

University of Ottawa

Honours BSc Computer Science, Co-op

Ottawa, ON

Sept. 2023 – Dec. 2027

PROJECTS

NFL Contract Value Analyzer | *Python, XGBoost, scikit-learn, K-Means, pandas, Streamlit, Plotly*

- nfl-contract-analyzer.streamlit.app | [Demo](#) | [GitHub](#)
- Trained separate XGBoost regression models per position to predict fair market APY for 264 active NFL players, achieving R^2 of 0.96 for QBs and MAE under \$1M for WRs and TEs
- Engineered 40+ features including injury-adjusted stats scaled to a 17-game pace, per-game production rates, career peak stats, and guarantee percentage to normalize across players with varying availability
- Applied K-Means clustering on per-game production rates and age to discover 4 unsupervised archetypes per position, surfacing groupings like WR1/Alpha and Slot Technician without predefined labels
- Built a deterministic data pipeline joining nflverse seasonal stats with Over The Cap contract data on GSIS player ID, processing 50,000+ raw records down to 89 legitimate market deals for model training

FilmGrid | *React, Node.js, Express, MongoDB, SerpApi, Cheerio, Mapbox, Vercel, Railway*

- filmgrid-flax.vercel.app | [Demo](#) | [GitHub](#)
- Built a full-stack movie theatre finder surfacing real-time showtimes for 15+ Toronto theatres using the SerpApi Google Maps engine with geolocation-based distance sorting
- Engineered Cheerio web scrapers for indie theatres including Revue Cinema and Paradise Theatre, providing showtime data unavailable on Fandango or Google Movies
- Deployed a decoupled architecture with the React frontend on Vercel and Node/Express backend on Railway, with in-memory caching on a 2-hour TTL and TMDb API integration for movie metadata

Cosmora | *React, Three.js, React Three Fiber, NASA API, Vercel*

- cosmora-mu.vercel.app | [Demo](#) | [GitHub](#)
- Built a 3D interactive solar system with real-time free-fly navigation and NASA texture-mapped planets, implementing Kepler's orbital equations to compute accurate planetary positions for any date
- Built a KNN threat classifier from scratch in JavaScript predicting asteroid danger level from size, velocity, and miss distance, integrated with the live NASA NeoWs and ISS tracking APIs

EXPERIENCE

IT Service Desk Analyst

York Region

May 2024 – Aug. 2024, May 2025 – Aug. 2025

Newmarket, ON

- Automated weekly IT incident reporting with SQL and Excel, cutting manual reporting time by roughly 3 hours per week across a team of 10+ technicians
- Built dashboards tracking 500+ monthly incidents by category, priority, and resolution time, with findings used to inform staffing decisions
- Standardized ticket taxonomy across 15+ service categories, improving data consistency and enabling accurate trend analysis for management reporting

Director of Academic Affairs

Computer Science Student Association (CSSA)

Sept. 2023 – May 2024

University of Ottawa

- Organized professional development events including a Nokia office tour for 50+ CS students, handling logistics and outreach end to end
- Served as the primary liaison between the student body and department administration on academic policy and programming

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, Java, HTML/CSS, R

ML & Data: XGBoost, scikit-learn, pandas, K-Means clustering, feature engineering, Plotly, Streamlit

Web: React, Node.js, Express, Three.js, MongoDB, REST APIs

Tools: Git, AWS, Docker, PostgreSQL, Nginx, VS Code
